SAP BTP Trial Account – Step 3 Onwards

Exam■Ready | Lab■Ready | Concept■Focused Notes

1. SAP BTP Trial Account – Conceptual Overview

The SAP BTP Trial Account is a free, time■bound SAP■provided environment designed for learning and experimentation.

It mirrors real enterprise SAP BTP account structures, enabling hands■on practice without commercial commitment.

The trial environment allows users to:

• Understand SAP BTP account hierarchy

• Explore services conceptually and practically

• Perform admin■level configuration safely

• Prepare for SAP certification and exams

Trial accounts are automatically provisioned and managed by SAP, removing infrastructure complexity for learners.

2. Prerequisites – Explained Clearly

A prerequisite is not just a requirement but a dependency that ensures smooth access.

The only mandatory prerequisite is an SAP Universal ID.

This ID acts as the master identity across all SAP systems.

Without SAP Universal ID:

• Trial account creation is impossible

• SAP BTP Cockpit access is denied

• Learning Hub and certification access fails

Hence, SAP Universal ID is the foundation for all SAP BTP interactions.

3. SAP Universal ID – Deep, Exam■Ready Understanding

SAP Universal ID is SAP's centralized digital identity platform.

Key purposes:

• Single login for all SAP platforms

• Identity consolidation

• Exam and certification tracking

• Secure access control

Technically, it is an identity layer that maps users to SAP landscapes securely.

In exams, remember:

SAP Universal ID is mandatory, persistent, and user■owned.

4. Step■by■Step: SAP BTP Trial Account Creation

Step 1: Login to SAP BTP Trial page using SAP Universal ID

Step 2: Accept trial terms and conditions

Step 3: SAP provisions a Global Account automatically

Step 4: Default Subaccount is created in a fixed region

Step 5: BTP Cockpit access is enabled

No manual infrastructure setup is required in trial mode.

5. SAP BTP Cockpit – Conceptual Screen Walkthrough

SAP BTP Cockpit is the central administrative UI.

Conceptual screens:

• Global Account Overview

• Subaccount Overview

• Entitlements & Quotas

• Service Marketplace

• Security & User Management

The cockpit follows a top■down navigation model.

6. Global Account – Conceptual Clarity

Global Account is the top■level commercial and administrative container.

Responsibilities:

• Entitlement distribution

• Region availability

• Subaccount creation

In trial mode, Global Account configuration is restricted and SAP■managed.

7. Subaccount – Deep Understanding

A Subaccount is where real work happens.

Characteristics:

• Region■specific

• Hosts applications and services

• Security configuration point

• Runtime environment container

All learning and labs are executed at Subaccount level.

8. Important Notes for Trial Users

• Trial validity is limited

• Services are quota■restricted

• Data may be deleted automatically

• No SLA or production support

Trial is for learning, not deployment.

9. Next Learning Steps

After trial setup mastery, learners should move to:

• Cloud Foundry runtime

• SAP UI5 development

• CAP model

• BTP Security & Authorization
